(4) 拉伸应变痕 Stretcher strain marks

仅适用于表面质量级别为 FC 和 FD 的钢板及钢带

It is only applied to the steel sheets & strips with surface quality grade FC and FD.

低碳钢通常会发生时效, 导致屈服强度上升, 断后延伸率下降, 加工过程中产生桔皮, 表面粗糙等缺陷, 因此, 需规定各牌号的拉伸应变痕保证时间。各牌号拉伸应变痕如下表所示。

Aging often occurs on low carbon steel and causes steel yield strength to increase and elongation to decrease, which may lead to the occurrence of defects such as orange peels and coarse surface during processing. Therefore, it is necessary to specify guarantee time for tensile strain marks of each steel grade. Refer to following table for provisions of tensile strain marks of each steel grade.
