### 1.3 热轧酸洗机组简介 Introduction to pickling unit

首钢目前共计 4 条热轧酸洗板生产机组，具备 377 万吨酸洗板生产能力，其中迁钢基地连续式酸洗机组、京唐基地连续式酸洗机组均于 2020 年相继投产，引入激光焊接、在线拉矫破鳞、紊流酸洗、在线平整、在线拉矫、切边、涂油等工序。

Shougang currently has 4 pickling production lines with a production capacity of 3.77 million tons of pickled plate. Among them, the continuous pickling line at Qiangang Base and the continuous pickling line at Jingtang Base were put into operation one after another in 2020, introducing laser welding and online Stretching and correcting scales, turbulent flow pickling, online leveling, online tensioning, trimming, oiling and other processes.

首钢在线汽车板使用性能数据库覆盖 1200MPa 级别及以下汽车板牌号，内容包含化学成分、金相组织、力学性能、成形性能、碰撞性能、疲劳性能等，可满足汽车厂认证和选材的需求，为汽车企业提供准确的材料成形仿真数据。

Shougang online automotive steel performance database covers grades up to 1200MPa, including chemical composition, metallurgical structure, mechanical properties, forming properties, crash performance, fatigue performance, etc. It can meet the requirements of auto factory certification and material selection, and provide accurate material forming simulation data for auto enterprises.

### 2.1 冷成型用钢 Cold forming steel

冷成型就是在不加热的情况下对材料进行冲剪、弯曲、拉伸等加工方式。冷成型工艺有锻压、辊压、冲压等。冷成型用钢具有良好的冲压性能、焊接性能和较高的尺寸精度，按照其用途可以分为一般用、冲压用、深冲用和超深冲用，如家电外壳、汽车刹车片、离合器等零部件。

Cold forming is the process of punching, shearing, bending and stretching materials without heating. The cold forming process includes forging, rolling, stamping and so on. Cold forming steel has good stamping performance, welding performance and high dimension precision. According to its use, it can be divided into commercial purpose, drawing, deep drawing and extra-deep drawing, such as home appliance shell, automobile brake pad, clutch and other parts.

### 2.6 优质碳素钢 High-quality carbon steel

优质碳素钢依靠调整含碳（C）量来改善钢的力学性能，所含的硫、磷及非金属夹杂物比碳素结构钢少，机械性能较为优良。主要用于制造一般结构及机械结构零、部件以及建筑结构件和输送流体用管道。根据使用要求，有时需热处理（正火或调质）后使用。

25 以下的低碳钢系列塑性好，易于拉拔、冲压、挤压、锻造和焊接。常用来制造螺钉、螺母、垫圈、小轴以及冲压件、焊接件，有时也用于制造渗碳件。30-55 中碳系列因钢中珠光体含量增多，其强度和硬度较前提高，淬火后的硬度可显著增加。以 45 钢最为典型，它不仅强度、硬度较高，且兼有较好的塑性和韧性，即综合性能优良，在机械结构中用途最广，常用来制造轴、丝杠、齿轮、连杆、套筒、键、重要螺钉和螺母等。60 以上的高碳系列经过淬火、回火后不仅强度、硬度提高，且弹性优良，常用来制造小弹簧、发条、钢丝绳、轧辊等。

The mechanical properties of high-quality carbon steel can be improved by adjusting the content of carbon (C). The content of sulfur, phosphorus and non-metallic inclusions is less than that of carbon structural steel, and the mechanical properties of high quality carbon steel are better. It is mainly used to manufacture parts and components of general structure and mechanical structure, as well as building structural parts and pipe for conveying fluid. According to the use requirements, sometimes need heat treatment (normalizing or quenching) after use.

Low carbon steel with carbon content below 0.25% has good plasticity and is easy to be drawn, pressed, extruded, forged and welded. Commonly used to manufacture screws, nuts, washers, small shafts and stamping parts, welding parts, sometimes also used in the manufacture of carburized parts. Due to the increase of pearlite content in 30-55 medium carbon series steel, its strength and hardness are improved compared with those before, and the hardness can be significantly increased after quenching. To 45 steel is the most typical, it is not only high strength, hardness, and has good plasticity and toughness, that is, excellent comprehensive performance, the most widely used in the mechanical structure, commonly used in the manufacture of shaft, screw, gear, connecting rod, sleeve, key, important screws and nuts. More than 60 high carbon series after quenching, tempering not only strength, hardness, and excellent elasticity, commonly used to manufacture small springs, spring, steel wire rope, roll, etc..
